RESEARCH INTERESTS

Keywords: quantum gravity: gauge/gravity duality, quantum structure of black holes and information theory, HEP and string theory. Twistor methods, integrability, topological field & string theories.

I am a graduate student in theoretical physics at the University of Cambridge. My coursework in field theory and mathematical physics, alongside my research experiences, have altogether driven my interest towards studying the role of symmetries in the context of HEP theory.

My previous research experiences demonstrate my ability to work efficiently in a team but also study and solve research problems independently.
